

Wrexham - Integrated Network Map (INM) - Route Proposals

Stage 1 - Network Aims & Requirements

The following Network Aims have been developed within Wrexham to assist with the planning & development of the first Integrated Network Map.

Wrexham County Borough Council plan to **increase travel choices** so that residents, commuters and visitors will have sustainable travel options¹

To help achieve this vision the network aims for the Integrated Network Map are:

- to improve active travel connections into and through Wrexham town centre. Residents living adjacent to the centre should be able to easily walk and cycle to access services, facilities and shops. Once within the town, people should be able to move around safely and pleasantly by using the most sustainable modes of transport²
- to improve access to businesses and employers in the wider Wrexham catchment area, particularly focusing on corridor routes to the Western Gateway area and Wrexham Industrial Estate³
- to create local neighbourhood routes in Gwersyllt, Gresford, Rossett, Chirk and Ruabon – connecting local train stations⁴, shops, schools and community facilities⁵

Outline Prioritisation

The timescales for the delivery of these routes and schemes has been based on a desk top review carried out to classify the routes following the requirements of the Welsh Government advice:

- Short term (shovel-ready) – schemes which are ready for immediate delivery or are under active development
- Medium term – schemes where there is a clear intention but delivery is dependent on funding availability or other issues
- Long term – more aspirational schemes or those awaiting defined solution

The Integrated Network Maps are aspirational maps and the delivery of all of the routes and schemes is based on Wrexham CBC securing additional funding. Whilst they include proposals for new infrastructure and improvements to existing infrastructure that are under active development, they also include possible plans for the next fifteen years which are subject to planning permissions or might be affected by future events.

At this stage, any Existing Routes (as included on the Existing Route Map) that have Passed (score of 70% or above) have been classified as Long term routes and will be re-audited, upgraded and improved as funding allows.
